

Vadim Kubrak

AI / LLM Application Engineer

Moscow, Russia — open to EU relocation · kubrak15112006@gmail.com · t.me/Castiel68
archangel-gabri.github.io · github.com/Archangel-gabri · linkedin.com/in/vadimkubrak

I build **LLM-powered systems that run in production** — not notebooks, not demos. Multi-agent pipelines, RAG and MCP tooling wired into real products, plus the boring half that keeps them alive: deployment, TLS, monitoring, backups and on-call.

EXPERIENCE

Data Analytics Intern — Gazprombank (JSC), Moscow Mar — Aug 2026

- Pulled and joined data from several warehouse tables (transactions, customer profiles, operation history) in SQL and built an analytical view: segmentation, cohort retention, activity, average transaction value, churn.
- Presented findings as interactive Python dashboards (pandas, NumPy, Matplotlib/Plotly), each with a short business-readable takeaway.
- Built the internship's main deliverable: a pipeline that collects data from several sources, computes the metrics and lets a language model draft the narrative commentary analysts previously wrote by hand, wrapped in an internal FastAPI interface. **Report preparation went from most of a working day to about fifteen minutes.**

Founder, Backend & Infrastructure Engineer — HubVPN 2024 — present

- Design, build and operate a multi-node VPN platform with live paying users: a Remnawave control plane over an Xray/VLESS fleet — German master node, Moscow cascade, exits in Finland and Japan.
- Telegram-first onboarding and subscriptions; DPI-resistant transport (Vision/XHTTP), TLS, nginx, monitoring, backups and incident response handled end to end.

SELECTED PROJECTS

Golf Club CRM — booking, membership and billing for a Moscow golf club, in production. 53 REST endpoints on FastAPI (SQLAlchemy, Pydantic, JWT); React 18 / TypeScript / Vite front end behind nginx with TLS.

MedSpravki REU — medical-certificate registry for the Physical Education department at Plekhanov REU. ASP.NET Core + PostgreSQL, with a local Ollama vision model reading scanned certificates into structured records. Runs on real hardware.

Process-level evaluation of 12 LLMs — 75 university mathematics problems graded on the reasoning chain, not just the answer, by an LLM-as-a-judge against a multidimensional rubric. Dataset, prompts and scoring code published openly.

GORKYCODE 2025 — hackathon service for Russian public tenders: computes the starting contract price under 44-FZ and drafts the technical specification through an LLM-driven dialogue. Spec preparation dropped from roughly eight hours to minutes.

SKILLS

AI / LLM: Claude API · OpenAI API · MCP · RAG · multi-agent orchestration · prompt engineering · LLM-as-a-judge evaluation · embeddings & vector search · LangChain · Ollama · PyTorch · scikit-learn

Backend & data: Python · FastAPI · SQLAlchemy · Pydantic · ASP.NET Core · PostgreSQL · SQLite · Redis · REST · JWT/OAuth · pandas · NumPy · SQL

Frontend: TypeScript · React 18 · Vite · TanStack Query · Electron

Infrastructure: Linux · Docker Compose · nginx · systemd · GitHub Actions · CI/CD · Grafana · Prometheus · Playwright · Git

EDUCATION & LANGUAGES

Plekhanov Russian University of Economics

BSc, Statistics / Data Science — in progress (2024 — 2028)

School 21 (Sber)

Data Science track — peer-to-peer C and algorithms (2025 — present)

Languages

Russian — native · English — C2 Proficient, [EF SET 89/100](#)

Research identity

ORCID [0009-0003-1553-2982](#)
